Experience

Software Developer: April 2022 – Present at CCSS, San Jose, CR.

As software developer support engineering, I have successfully contributed to the development, support, maintenance, and migration of code-base and applications within the Microsoft 365 ecosystem, C# and python. My key responsibilities include:

- Creating responsive user interfaces using react JS, enhancing user engagement.
- Optimizing service to use python bot who speak with user with specific commands on whatsapp
- Collaborating on SharePoint content management systems for organize and validation of recipes and maintaining.
- Using Jira to track and manage project tasks, fostering efficient communication and transparency within the team.
- Automated database backup processes, reducing data loss.

Software Developer: May 2021 - Apr 2022 at Lightspeed Tech Development

As a Software Developer at a leading Betting House Sites software company, I am responsible for migration, developing, and maintaining frontend and robust backend applications to enhance the betting experience for users worldwide. Leveraging my expertise in a wide range of technologies. My key responsibilities include:

- Integrating third-party services and payment gateways to facilitate secure transactions and enhance user experience.
- Successfully migrated business application to RESTful Web APIs using C# and ASP.NET Core, ensuring seamless integration of various components.
- Designing and optimizing databases using PostgreSQL and SQL Server, ensuring efficient data storage and retrieval for fast and reliable performance.
- Simplified and updated codebase, increasing software efficiency with SOLID principles
- Using Jira to track and manage project tasks, fostering efficient communication and transparency within the team.

Software Developer: Jun 2019 - Apr 2021 at Conzultek

As lead Software engineer, we designed and developed innovative web applications that allowed clients to manage their Microsoft 365 licensing resources. Successfully implemented a number of functionalities to enhance the web application. My key responsibilities include:

- I leveraged in technologies such as C#, Azure Functions, Azure Cosmos DB, Azure SQL Database, Azure Blob Storage, and Microsoft Power Automate to design, develop, and optimize client-centric solutions.
- Developed user-friendly interfaces using bootstrap 5 and React Js
- Using DevOps to track and manage project tasks, fostering efficient communication and transparency within the team.
- Additionally, I managed version control and CI/CD processes using Azure DevOps, Azure Pipelines, and Azure Repos, streamlining code deployment and maintaining a robust development pipeline. With Microsoft Power BI, I provided insightful data visualizations and reports, empowering owner to make informed decisions based on real-time analytics.

Software Developer: Feb 2018 - May 2019 at GBS Data Corporation S.A.

As a Software Developer at a Betting House Sites software company, I am responsible for developing, and maintaining frontend and robust backend applications to enhance the betting experience for users worldwide.

My key responsibilities include:

- Participated in the development of the currency exchange rate Web API, I provided insightful data visualizations and reports, empowering the owner to make informed decisions based on real-time analytics.
- Developed a feature-rich messaging app
- Participated in the SCRUM development process, contributing to improvement in project sprint completion times.
- Using Jira to track and manage project tasks, fostering efficient communication and transparency within the team.

Junior Software Developer: Oct 2016 - Feb 2018 at Rossmon S.A.

As a Junior Software Developer at a startup Rossmon S.A company, I am responsible for understating the requirements of user client and creating frontend and backend application. My key responsibilities include:

- Coded an accounts receivable tracking app that reduced accounts receivable by 20%
- Designed dynamic web components using JavaScript, Bootstrap and JQuery
- Participated in the SCRUM development process
- Using Jira to track and manage project tasks, fostering efficient communication and transparency within the team.

Junior Software Developer: Oct 2016 - Feb 2018 at Testing Software

As a Junior Software Developer at a testing Software, it was where I did my supervised internship. My key responsibilities include:

- Manual testing of the company's internal application.
- I participated in a scalable e-commerce platform with an MVC framework
- I participated in the SCRUM development process
- Using Jira to track and manage project tasks, fostering efficient communication and transparency within the team.

Institution	Studies	Year
Universidad Americana	Bachelor's degree in Systems Engineering	2023
Microsoft	Microsoft Certified: Azure Fundametals	2021
SCRUMstudy	Accreditation Body for Scrum and Agile· Scrum Fundamentals Certifi ed (SFC)	2016
Colegio Universitario de Cartago (CUC)	Tec information Technology	2015

- Proficient at C# | C/C++ | Python | JavaScript | TypeScript | Java | PHP | Go | Searching Algorithms and Data Structures | Software Design Patterns & Principles (SOLID)
- Back-End | ASP.NET Core | Node.js | Express.js | Spring | Laravel | SOAP | REST | Swagger | GraphQL | WebSocket
- Front-End | HTML | CSS | Responsive Web Design | Figma | Bootstrap | Sass | SVG | Canvas | Web APIs | JSON | AJAX | RxJS | Redux | jQuery | Angular | React | Vue.js | Vuex | npm | nvm | Chart.js
- SQL | MySQL | Microsoft SQL Server | Microsoft Access | Oracle Database | PostgreSQL
- NoSQL | MongoDB
- OS | Shell | bash | PowerShell | Batch | cmd | Linux | macOS | Windows
- ORM | Entity Framework | Prisma | Mongoose | Hibernate
